

Stock Availability And Item Is In Stock

Rudra Narayan Moharana
Cloudalp

Overview

Displaying stock availability details on each item and how much stock available to the particular item.

Steps for using display stock details in Product List Page

1. Download the Extension Development tools in the file cabinet .
2. Install as per our requirement (node ,npm,gulp).
3. Fetch the existing activate extension using command (gulp extension:fetch).
4. Create a baseline extension . using command (gulp extensions:create) .
5. Replace our module to the base line extensions .
6. In the starter file in our module inside the mount to app method extend a facets item cell view and extend the child view and set to the our custom child view in facets item cell view.
7. In the view file just navigate to the getContext() method get to the data to the model using this.model.get('isinstock') and store in a variable since also get to the data of display quantity in the model using this.model.get('quantityavailable_detail').quantityavailable and set to the local variable .
8. Then we need some logic if the item is in stock is true and quantity is 0 then is in stock is false .
9. Then we need to add in the template inside the module.
10. Then add a data view inside the facets_items_cell_grid.tpl file on Theme Development Tool then deploy the theme using command (gulp theme:deploy).
11. Once all are set then update the manifest in extension using command (gulp extensions:update-manifest).
12. Then deploy the extension using command (gulp extensions:deploy).
13. Once all deploy completed the open the netsuite extension manager select the our extensions and activate it once activate completed then we can see the result in the Product List Page .
14. Output:-

Samsung AC

£11556.92307692.00

Item In Stock: ✓

Total Stock: 50

Arrow Shirts

£65384.61538462.00

Item In Stock: ✓

Total Stock: 2
